

## Tarun Mittal

### Testimonial:

From a timid teenager who had worked hard to get into IITs to a confident professional who can stand tall in this cut throat competitive world, my alma mater IIT Ropar has truly transformed me

Academically, the concepts I learnt about mechanical engineering are being put to good use in my current job profile. The ideal faculty student ratio at the institute not only helps in better understanding but creates an informal bond with the faculty. Right from doubts in courses to advice on what to do in life, the faculty has always been there to help.

The project work and the laboratory courses also taught a lot about teamwork (and the rule that one of members has to do most of the work). This has also contributed a lot in gaining some practical knowledge. The various clubs and festivals (Zeitgeist) brought out the hidden talents in me, which I am putting to good use at the employee get together at my company. Sporting facilities (although less but sufficient) helped to beat the stress of exams and assignments.

Plus the best part is that I got a peer group which was super intelligent (remember the cutoffs for entry into IIT Ropar are quite high) and super fun. The friendships I made would be nurtured for a lifetime and hopefully I can also get some leverage from them. (My batch mates include civil servants; start up founders, corporate professionals and researchers)

### **Tarun Mittal**

I am working as a Junior Manager in Centre for Engineering and Technology (CET) which is an in house consulting unit of Steel Authority of India Ltd. (SAIL)
